

# How to add Airgoo Controller Plugins to SignalRGB

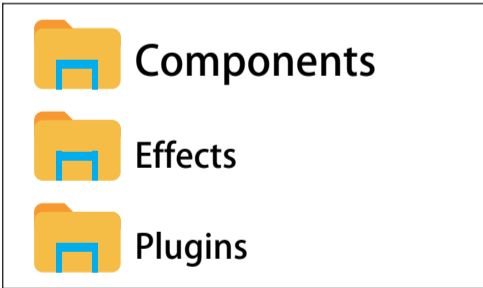

1. Download free lighting effects package:  
Go to airgoo website (<https://www.airgootech.com/>) to download the free lighting effects package.

2. Unzip the package and copy the unzipped files to the SignalRGB:  
Run SignalRGB application, click "Settings" (at the bottom left corner of application) ->  
Choose "System Info" -> "Device Information" -> go to "System Directories" ->  
click "Open User Directory" (This is User Customize Directory, copy the unzipped files here)

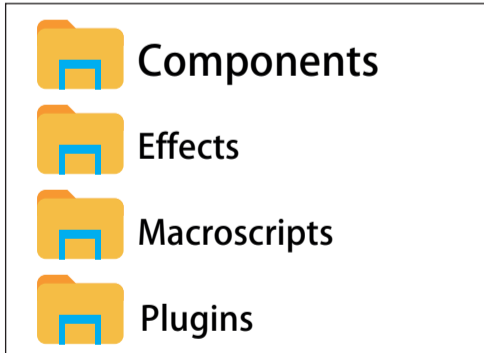

Unzipped lighting effects files

Copy and replace

Application's User Customize Directory

3. Restart the SignalRGB software after completing the copy.
